

USER MANUAL

QMS — Operations Guide

Version 1.0 | Audience: all users (staff, owners, leads, deputy, director)

1. Signing in

1. Open the app. If you are not signed in you reach `/login` .
2. Enter the **email** and **password** given to you (case-insensitive email; exact password).
3. Click **Sign in**. You land on your dashboard.

Only *active* accounts can sign in. If you get "invalid credentials", confirm you used the exact seeded password and that the `DATABASE_URL` env is configured on the server (a server-side DB error looks identical in the browser).

I forgot my password

1. Open **Forgot password** on the login page.
2. Enter your email and submit — a reset link/token is issued (expiring, single-use).
3. Follow the reset flow and choose a new password.

2. Your Dashboard

- Shows your records, open work across your team (if you manage people), overdue training, and notifications.
- Teams/leads additionally see **team rollup cards** and **person progress** for their reports.
- The **New record** button creates work; it is hidden for monitor-only roles (Director).

3. Working with Records

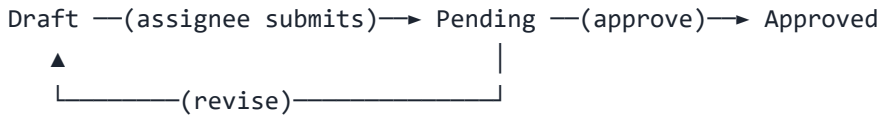

QMS tracks five record streams. They work the same way:

Module	What it tracks
Documents	Policies, SOPs, controlled documents (with revision)
CAPA	Corrective & preventive actions (priority, due date)
Non-conformances	Nonconformity reports (source, severity)
Audits	Audit events and findings
Training	Employee course/training records (due date)

3.1 Create a record

1. Go to the module (e.g. **CAPA**).
2. Click **New record**.
3. Fill title, assignee (only people in your hierarchy), and module fields.
4. Save — the record is created in **Draft** status.

3.2 Status lifecycle

- **Draft:** only the assignee can edit further.
- **Pending:** awaiting approval from a manager in the assignee's reporting chain (or the Director as final authority).
- **Approved:** final; read-only (history preserved).

3.3 View, search, filter

- You see records assigned to you and to all people below you in the org chart.
- Filter list by status; open a record to see details, comments, and history.

3.4 Approve / Request revision (managers & Director)

1. Open a **Pending** record assigned below you.
2. Use the **approval panel**: *Approve* moves it to Approved; *Request revision* returns it to Draft with feedback.
3. Add a comment if needed — it is stored in history.

4. Committees & Tasks

4.1 Browse committees

1. Open **Committees** in the nav.
2. See committee cards (name, description, members, created by).

4.2 Create a committee

Requires the *committee management* permission (granted by the Director).

1. Click **Create committee**, name it, describe it, save.

4.3 Manage members

1. Open a committee → **Add member**.
2. Pick a user and role: *head* (can assign tasks) or *member*.

4.4 Assign tasks

1. Open the committee → **Assign task**.

2. Title, optional description, due date, assignee (member of the committee).
3. Task status flow: `assigned` → `in_progress` → `submitted` → `approved` .

5. Notifications & Email

- Bell icon shows unread in-app notifications; click to open the linked record.
- Depending on configuration, key events also send **email** (task assigned, assigned work, submission for review, approval, revision).

6. Admin Guide (Director only)

6.1 Team management

1. **Admin** → **Team**.
2. Each profile card shows name, role, reports-to; you can edit the *email* field (saves on blur).
3. Use **Add user** to create a profile (credentials shown once).

Emails only send when the profile has a real delivery address; seeded addresses like `@qms.local` are not on the internet. With the default sender `onboarding@resend.dev` , mail is only delivered to the Resend account owner until a custom domain is verified.

6.2 Committee permissions

1. **Admin** → **Permissions**: toggle *manage committees* for a user (self-grant is rejected).

6.3 Succession

1. **Admin** → **Succession**: choose a successor so they inherit leadership (reports-to reassignment).

6.4 Test email

1. **Admin** → **Test email** sends a sample message to the target profile's email to confirm Resend is configured.

7. Frequently Asked Questions

Question	Answer
I can't see the New button.	Your role is monitor-only (Director) or lacks create permission.
I can't approve a record.	Approval is only for the assignee's manager chain (or Director). You must be above the assignee in the org.
I can't assign a record.	Assignments are only allowed to people inside your reporting scope.
Where is history?	Open the record → History section shows every status change with author and comment.

A record disappeared after "delete".	Deletes are soft — the record is hidden; an administrator can restore/inspect the data.
Why are some emails not arriving?	Recipient must have a real email; sender must be deliverable (onboarding@resend.dev → only account owner).

8. Support & Escalation

- Role/permission questions → your reporting manager.
- Technical issues (login, missing records, email) → system administrator (Director).
- Reference deployment & configuration notes in `DEPLOY.md`.
